

# Zeyad Azab

## .Net Backend Developer

+201063736694 | zeyadazzapo@gmail.com | Giza, Egypt  
linkedin.com/in/zeyad-azab/ | github.com/Zeyad-Azp

### Objective

Third-year AI student at Cairo University with a strong interest in backend development using ASP.NET Core and the .NET ecosystem. Hands-on experience building RESTful APIs and full-stack web applications following N-Tier, Onion, and Clean Architecture patterns. Passionate about writing clean, scalable code and eager to grow as a Software Engineer through real-world projects.

### Education

**Bachelor of Computers and Artificial Intelligence, Cairo University** Aug 2023 – Jul 2027  
Major: Artificial Intelligence

### Experience

**Software Development - Full stack .NET Web Development** Nov 2025 – Jul 2026

Digital Egypt Pioneers Initiative (DEPI) with Eyouth

- Built scalable back-end services and RESTful APIs using ASP.NET Core Web API, following Clean Architecture principles.
- Developed dynamic web applications using ASP.NET Core MVC with Razor Views, HTML5, CSS3, and JavaScript.
- Front-end development using HTML5, CSS3, and JavaScript.
- Database management with SQL Server, Git/GitHub, and Basic knowledge of Docker and Containerization.

**Full stack .NET Web Development Training Program**

Aug 2025 – Oct 2025

Information Technology Institute (ITI)

- Completed an intensive 120-hour full-stack training program, delivering a production-ready MVC application within a 4-week deadline.
- Hands-on experience with ASP.NET Core MVC, Entity Framework Core, and Microsoft SQL Server.
- Built and deployed web applications that demonstrate proficiency in N-Tier Architecture and secure development principles.

### Technical Skills

**Backend:** C#, .NET Core, ASP.NET Core MVC, ASP.NET Core API, RESTful APIs, OOP, Entity Framework Core, LINQ, N-Tier Architecture, Onion & Clean Architecture, Repository Pattern, ASP.NET Identity, SOLID, Design Patterns, Dependency Injection, Containerization.

**Database:** Relational and non-Relational databases, Microsoft SQL Server, T-SQL, Database Modeling (ERD), Normalization (3NF).

**Frontend:** HTML, CSS, JavaScript, Razor Views, React (basic).

**Tools:** Visual Studio, Git/GitHub, Microsoft Azure, Trello, OutSystems Agile Platform.

**Other:** C++, Java, Python, Data Structures, Algorithms, Problem Solving, Prompt Engineering, Unit Testing (basic), Postman, Swagger/OpenAPI.

### Projects

**Forsa – Event Management Web Application (DEPI Graduation Project)**

[GitHub Repo](#)

- **Project Description:** Engineered a full-stack event management platform connecting Organizers, Venue Owners, and Attendees in one system, supporting 3 distinct user roles through JWT-based authentication and authorization, ensuring 100% secure access control across the platform. Designed and implemented 10+ RESTful API endpoints following Clean Architecture, enabling event creation, ticket booking, venue management, and reviews. Integrated role-based access control (RBAC) and architected a system using SignalR capable of handling 50+ concurrent real-time notifications for event updates.
- **Technologies:** React, C#, ASP.NET Core Web API, SQL Server, Entity Framework Core (EF Core), JWT Authentication, SignalR, Clean Architecture, RESTful APIs.

**Car Rent, Car Repair & Service Management System (ITI Graduation Project)**

[GitHub Repo](#)

- **Project Description:** Built a full-stack ASP.NET Core MVC application for car rentals and service bookings with RBAC for Admin, Mechanic, and User roles, Integrated PayPal payment gateway, Google

Gemini AI chatbot, and automated email notifications via SMTP, delivering a secure and scalable solution.

- **Technologies:** C#, ASP.NET Core MVC, SQL Server, EF Core, Razor Views.

### **Duvar – Handmade Products Platform**

[GitHub Repo](#)

- **Project Description:** A Full-Stack handmade products platform with secure authentication using BCrypt, product and category management, an admin dashboard, and automatic database seeding following N-Tier Architecture and the Repository Pattern.
- **Technologies:** C#, ASP.NET Core MVC, SQL Server, Entity Framework Core (EF Core), BCrypt.Net, Bootstrap 5, Razor Views, Repository Pattern, N-Tier Architecture.

### **Car Insurance Company System**

[GitHub Repo](#)

- **Project Description:** Applied a normalized relational database (3NF) using MS SQL Server, modeled through a detailed ERD covering 6+ business entities and 8+ tables. Enhanced a C# GUI application with fully validated CRUD operations, ensuring data integrity and improving system efficiency by reducing redundant data entry by approximately 40% through proper normalization and indexing techniques.
- **Technologies:** C#, SQL Server, EF Core.

## **Languages**

---

**Arabic:** Native.

**English:** Intermediate (B1).
